Installation

48-Port Gigabit Ethernet Smart Managed Plus Switch GS750E

Step 1. Connect the equipment.

Step 2. Connect power.

Step 3. Check the status.

Package Contents
- NETGEAR 48-Port Gigabit Ethernet Smart Managed Plus Switch
- Rubber footpads for tabletop installation
- AC power cord (localized to country of sale)
- 19-inch rack-mount kit for rack installation

Power LED
- On
- Off

Port LEDs (Ports 1–48)
- 1000 Mbps link
- 100 Mbps link
- No link (off)

SPD LED
- 1 Gbps link
- 100 Mbps link
- No link (off)
Configuring the Switch

Smart Managed Plus switches are plug-and-play, so they can be used without any configuration. You can also configure and manage additional advanced features of the switch either by using your computer’s web browser or by installing the ProSAFE Plus Configuration Utility on your Windows-based computer.

Web Browser Access

You can configure a switch when it is connected only to your computer (off-network), or connected to your computer and your network (on-network).

➢ To use your web browser to configure your switch:

1. If you are configuring the switch off-network, record your computer’s TCP/IP configuration settings, and then configure the computer with a static IP address of 192.168.0.210 and with 255.255.255.0 as the subnet mask.
   Note: If you are unsure how to do this, visit netgear.com/support and search for Static IP address on computer.
2. Plug the switch into a power outlet and connect your computer to the switch using an Ethernet cable.
3. If you are configuring the switch on-network, connect the switch to your network with another Ethernet cable.
4. Open a web browser and enter the IP address of the switch.
   If the switch is off-network or connected to a network with no DHCP server, use its default IP address, http://192.168.0.239. If the switch is connected to a network with a DHCP server, use the IP address that the DHCP server assigned to the switch. If you are unsure how to determine the IP address of the switch, you can use the ProSAFE Plus Configuration Utility.
5. Enter the password. The default password is password.
6. Click the Login button. You can now configure additional options for the switch in the web management interface.
7. When you finish configuring an off-network switch, return your computer to its original TCP/IP settings and connect the switch to your network using an Ethernet cable.

ProSAFE Plus Configuration Utility Access

➢ To configure the switch:

1. Double-click the ProSAFE Plus Utility icon.
   The configuration home page displays a list of Smart Managed Plus switches that it discovers on the local network.
2. Select the switch that you want to configure from the list.
3. When prompted, enter the password. The default password is password.
4. Use the utility to configure the switch settings.
   For a description of Smart Managed Plus features, see the ProSAFE Plus Switch Utility User Guide. You can access the user guide through links on the Help tab of the utility.

Specifications

Network Environment

<table>
<thead>
<tr>
<th>Network interface</th>
<th>RJ-45 connector for 10M/100M/1G copper connections, SFP port for 100M/1G fiber connections.</th>
